EDUCATION

Bachelor of Computer Science and Engineering

Daffodil International University

Period: 05/2015 - 04/2019

CGPA: 3.55 out of 4.00

EXPERTISE

TECHNOLOGIES

- JavaScript
- HTML5
- CSS3
- PHP
- VueJs
- ReactJs

FRAMEWORKS / LIBRARIES

- Laravel
- Nuxt.js
- jQuery

DATABASE

- MySQL

VERSION CONTROL

- Git

LANGUAGE

- English
- Bengoli

MY JOURNEY

I chose to become a web developer because I was captivated by the potential of creating something impactful from scratch. My journey started during a campus seminar where a local innovation group showcased a stunning web interface they had developed. That moment sparked a realization in me: every business, big or small, needs a robust online presence to thrive, especially in a developing country like ours. I saw an opportunity to make a difference by building efficient and attractive websites and applications that could elevate businesses and enhance user experiences. My passion for technology and continuous learning, combined with the ability to solve real-world problems, drives me every day in this field.

OVERVIEW

Over the past five years, I have worked on a variety of projects that have honed my skills and expanded my expertise in web development. I have developed e-commerce websites, web portals, and employee management systems, each presenting unique challenges and learning opportunities.

I have designed and implemented efficient database schemas, built user authentication systems, and integrated secure payment gateways.

My ability to manage projects from inception to delivery has been a crucial aspect of my work, ensuring that client requirements are met, and solutions are delivered on time. Additionally, I have configured and maintained VPS, set up server environments, and optimized server configurations to ensure smooth operations.

Collaboration and leadership have played a significant role in my career. I have managed other developers, assisting them with their tasks and ensuring cohesive teamwork. Handling the Git process for version control and managing the deployment pipeline has been a significant responsibility, ensuring smooth transitions from staging to production environments.

PROFILE

With over four years of extensive experience in HTML, CSS, JavaScript, and the Laravel Framework (PHP), I have honed my skills in web development and maintaining web applications. My expertise spans the full stack, and I am well-versed in managing servers (VPS) and databases, ensuring robust and scalable solutions.

WORK EXPERIENCE

Revo Interactive

September, 2023 – November, 2024

Senior Backend Developer

- Develop scalable, efficient, and secure backend systems.
- Participate in code reviews to ensure high-quality, maintainable code across the team.
- Design and implement RESTful APIs for the frontend and other systems. Perform database migrations and optimize database performance through indexing, query optimizations, etc.
- Work closely with frontend developers to ensure APIs meet their needs. Address integration issues and ensure smooth data flow between backend and frontend.
- Implement security best practices like authentication, authorization, and data validation to protect against common threats.
- Write tests to ensure code quality, including unit, integration, and end-to-end tests and work with CI/CD pipelines to automate testing, build, and deployment processes.
- Provide guidance, mentorship, and support to less experienced developers in the team. Share best practices, new tools, and technologies with the team.

Revo Interactive

March, 2020 – August, 2023

Junior Backend Developer

- Write clean, efficient, and maintainable server-side code in programming languages such as PHP.
- Work with database management systems such as MySQL to store, retrieve, and manipulate data.
- Build and integrate RESTful APIs, handle data exchange in formats such as JSON and XML. Integrate third-party APIs into the system.
- Identify and debug issues in back-end code, implement effective solutions, and ensure stable server-side performance.
- Work closely with front-end developers, designers, and project managers to discuss requirements and provide progress updates.
- Participate in team discussions, brainstorming sessions, and collaborate to deliver features
